Chairman Message

Dear Members,

BNI Ciputra Golfpreneur Tournament 2022 Asian Development Tour has been successfully held at BSD Course on August 24 – 27, 2022 at Damai Indah Golf, BSD Course. Congratulations to the winner Suteepat Prateeptienchai from Thailand and special mention to George Gandranata who was best Indonesian Professional, Mathew Lumbantoruan as the best Indonesian Amateur and also to all Ciputra Golfpreneur Foundation Athletes who competed in the tournament. Thank you to all members and sponsors who has contributed their continued support.

I would like also to take this opportunity to say thank you to all the members for your continued patience during our club house renovation at Damai Indah Golf BSD Course which will be finished soon and all the work will be worth the wait.

Club is continually improving all facilities. The new driving range with the first new concept of golf & entertainment in Indonesia is now open at Damai Indah Golf PIK Course. Equipped with radar ball tracking technology that will give a new driving range experience. Other features such as restaurants, golf shops and an 18 hole putting course in one area will add to the exciting experience for both golfers and non-golfers.

Once again thank you to our valued members for your kind attention as always.
Stay healthy and keep playing golf.

A handwritten signature in black ink, appearing to be 'Z. Amali', written in a cursive style with a long horizontal stroke extending to the right.

THE RANGE

@ DAMAI INDAH GOLF

The Range @ Damai Indah Golf PIK Course, the first new concept of golf & entertainment in Indonesia is now open at Damai Indah Golf PIK Course. Equipped with radar ball tracking technology that will give a new driving range experience. Other features such as a restaurant, a golf shop and an 18 hole putting course in one area will add to the exciting experience for both golfers and non-golfers.

RENOVATION CLUB HOUSE

Damai Indah Golf is continually improving all facilities. The interior renovation at our Jack Nicklaus Signature Course, Damai Indah Golf BSD Course is almost complete and the new function rooms are now open for rent. The ambience of club house and restaurant is looked different now and some area still continuing the progress and will be finished soon.

Golf Course Maintenance

Infeksi Nematoda Parasit Tanaman dan Pengendaliannya *Plant Parasitic Nematode Infections and Their Control*

By Herdian

Gambar 1
Kenampakan nematoda dibawah mikroskop.
Appearance of nematodes under a microscope.

Istilah nematoda berasal dari Bahasa Yunani, yang terdiri dari dua suku kata yaitu, nema yang artinya benang, dan ode artinya seperti. Secara sederhana dapat diartikan bahwa nematoda adalah mikroorganisme atau makhluk mikroskopis yang berbentuk seperti benang atau cacing yang memiliki ukuran panjang 200 - 1.000 mikron, dan lebar 15 - 35 mikron (1.000 mikron = 1 mm). Karena ukuran yang sangat kecil ini, nematoda hanya bisa dilihat dengan jelas menggunakan alat mikroskop. Nematoda hidup didalam tanah, namun ada juga yang hidup diatas tanah biasanya terdapat didalam jaringan tanaman termasuk didalam benih. Nematoda yang hidup didalam tanah, ada yang bersifat saprofit karena dapat mempercepat proses pelapukan bahan organik menjadi humus. Saprofit adalah organisme yang hidup dan makan serta mendapatkan nutrisi dari bahan organik yang sudah mati atau membusuk. Namun, ada juga yang bersifat

parasit pada tanaman yang menyebabkan kerusakan bahkan menyebabkan kematian pada tanaman itu sendiri. Nematoda parasit disebut juga sebagai Organisme Pengganggu Tumbuhan (OPT) yang keberadaannya dapat merugikan tanaman budidaya jika tidak segera dikendalikan.

The term nematode comes from the Greek language, which consists of two syllables, nema which means "thread", and ode which means "like". In simple terms it can be interpreted that nematodes are microorganisms or microscopic creatures shaped like threads or worms that have a length of 200 - 1,000 microns, and a width of 15 - 35 microns (1,000 microns = 1 mm). Regarding it's very small size, nematodes can only be seen clearly using a microscope. Nematodes live in the soil, but there are also those that live above ground, usually found in plant tissues, including seeds. Some nematodes that live in the soil, are saprophytic because they can accelerate the process of weathering organic matter into humus. Saprophytes are organisms that live and eat and get their nutrition from dead or decaying organic matter. However, there are also parasites on plants that cause damage and even cause death to the plant itself. Parasitic nematodes are also known as pathogen whose presence can harm cultivated plants if not controlled immediately.

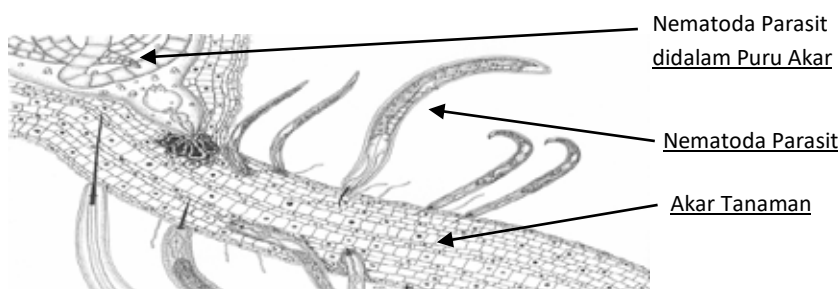

Kebanyakan nematoda parasit menyerang bagian akar tanaman, bahkan ada yang menetap didalam akar seperti jenis root-knot nematode (nematoda puru akar) yaitu *Meloidogyne* spp. Kerusakan pada akar akibat infeksi nematoda parasit berpotensi menyebabkan infeksi sekunder dari kelompok bakteri dan jamur patogen. Gejala serangan nematoda yang terlihat dari atas permukaan tanah yaitu, pertumbuhan tanaman terhambat, tanaman tampak kerdil, ukuran daun dan cabang primer mengecil, terdapat bercak atau blast pada daun, daun menguning lalu perlahan rontok. Selanjutnya, gejala yang terlihat dari bawah tanah adalah akar menjadi gelap dan membusuk, terdapat benjolan pada akar yang disebut puru untuk jenis serangan dari root-knot nematode. Pada bulan juli lalu, BSD Course melakukan kolaborasi dengan Klinik Tanaman IPB University guna melakukan deteksi nematoda yang ada dilapangan. Dari hasil analisa laboratorium, setidaknya ditemukan empat jenis nematoda yang bersifat parasit yang ditemukan di green BSD Course yaitu, *Helicotylenchus*, *Criconemoides*, *Hoplolaimus*, dan *Xiphinema*. Rekomendasi pengendalian yang diberikan adalah dengan menggunakan pestisida jenis nematisida kimia berbahan aktif fluopyram, fluensulfone dan abamectin.

Most of the parasitic nematodes attack the roots of plants, some even live in the roots, such as the root-knot nematode, Meloidogyne spp. Damage to roots due to parasitic nematode infection has the potential to cause secondary infections from groups of bacterial and fungal pathogens. Symptoms of nematode attack that can be observed from above the soil surface are stunted plant growth, stunted plant appearance, reduced leaf size and primary branches, spots or blasts on the leaves, leaves turn yellow and slowly fall off. Furthermore, the visible symptoms from underground are dark and rotting roots, there are lumps on the roots called gall for this type of attack from root-knot nematodes. Last July, The BSD Course collaborates with the Klinik Tanaman of IPB University to detect nematodes

in the field. From the results of laboratory analysis, at least four types of parasitic nematodes were found in the green BSD Course, namely, Helicotylenchus, Criconemoides, Hoplolaimus, and Xiphinema. The control recommendation given is to use chemical nematicide pesticides with the active ingredients fluopyram, fluensulfone and abamectin.

Pengendalian nematoda dengan bahan aktif kimia biasanya tidak hanya membunuh nematoda parasit, namun dapat membunuh seluruh mikroorganisme yang bersifat baik bagi pertumbuhan tanaman. Disamping itu, penggunaan bahan kimia yang terus-menerus akan menyebabkan penumpukan residu yang kurang menguntungkan bagi lingkungan dan manusia itu sendiri. Atas dasar tersebut, BSD Course ingin mengedepankan faktor ramah lingkungan dan aman bagi manusia, sehingga pengendalian ini menggunakan pendekatan biological atau pengendalian yang bersifat organik, yang dapat membunuh patogen atau nematoda target saja. Neem oil / minyak nimba atau minyak margosa adalah minyak sayur yang diperas dari buah dan biji pohon nimba (*Azadirachtin indica*), pohon yang berasal dari India. Sistem pengendalian dari Neem oil ini adalah dengan menurunkan daya makan serta mengganggu hormon nematoda parasit untuk tumbuh dan bertelur. Dosis Neem oil yang digunakan di BSD Course yaitu 3 liter Neem oil per hektar dengan aplikasi yang dilakukan sebanyak satu sampai dua kali dalam sebulan, dengan terus melakukan pengamatan dilapangan terhadap efektifitas Neem oil sebagai bionematisida.

*Control of nematodes with chemically active ingredients usually not only kills parasitic nematodes, but can kill all microorganisms that are beneficial for plant growth. In addition, the continuous use of chemicals will cause the accumulation of residues that are less beneficial for the environment and humans themselves. On this basis, the BSD Course wants to prioritize factors that are environmentally friendly and safe for humans, so that this control uses a biological approach or control that is organic in nature, which can kill only target pathogens or nematodes. Neem oil / minyak nimba or margosa oil is a vegetable oil that is squeezed from the fruit and seeds of the neem tree (*Azadirachtin indica*), a tree native to India. The control system of Neem oil is to reduce the power to eat and interfere with the hormones of parasitic nematodes to grow and lay eggs. The dose of Neem oil used in the BSD Course is 3 liters of neem oil per hectare with applications carried out one to two times a month, with continuous field observations on the effectiveness of Neem oil as a bionematicide.*

Golf Tips

Top of the Swing

Lloyd Jefferson Go - Asian Development Tour player

Saya ingin menunjukkan kepada Anda 3 posisi berbeda di bagian atas ayunan. Tidak ada satu posisi yang “benar” karena banyak pegolf hebat memiliki posisi puncak ayunan yang berbeda. Karena itu, saya akan merekomendasikan posisi “persegi” di atas posisi ayunan, karena tidak akan ada pengubahan rute klab dan peluang memukul bola secara lurus sangat meningkat.

1. Posisi diberhentikan. Posisi ini dimana clubhead diarahkan ke kiri sasaran.
2. Melewati posisi garis. Posisi ini dimana clubhead diarahkan ke kanan sasaran.
3. Posisi persegi. Kepala klub diarahkan ke paralel kiri target.

I want to show you 3 different positons at the top of the swing. There is not one “right” position because many great golfers have different top of the swing positions. This being said, I would recommend the “square” top of the swing position, because there will be no rerouting the club and the chance of hitting the ball straight is greatly increased.

- 1. Laid off position. This position is where the clubhead is pointed to the left of the target.*
- 2. Cross the line position. This position is where the clubhead is pointed to the right of the target.*
- 3. Square position. The clubhead is pointed towards left parallel of the target.*

New Golf Rules

USGA®

by: JHON R. TJAHDADI
Captain Club Committee

BACK-ON-THE-LINE RELIEF

Jika bola Anda tertancap di bunker dan berada di dekat bibir (gambar 1, 2), Anda diizinkan untuk mengambil bola yang tidak dapat dimainkan BACK-ON-THE-LINE OUTSIDE THE BUNKER relief. Anda dapat kembali ke garis lurus (menggunakan posisi bola asli sebagai titik acuan) dan turun sejauh 2 panjang tongkat DI LUAR bunker (gambar 3). Pinalti **2 pukulan** terjadi.

If your ball is plugged in the bunker and is near the lip (pic 1, 2), you are allowed to take an unplayable ball BACK-ON-THE-LINE OUTSIDE THE BUNKER relief.

*You can go back on a straight line (using the original ball position as a reference point) and drop within 2 club lengths OUTSIDE the bunker (pic 3). **2 stroke** penalty is incurred.*

KNOWING THE RULES CAN SOMETIMES HELP YOUR SCORE.
